Hong Kong

Egis engineering services to support provision of new and upgrade/replacement of air navigation equipment for Hong Kong's Three-Runway System

To cater for city's long-term air traffic demand, Hong Kong International Airport is developing into a Three-Runway System (3RS) that includes the construction of the Third Runway, modification of the existing North Runway and construction of airport support infrastructure, utilities and facilities. To support the 3RS implementation, new air navigation service (ANS) equipment and replacement/upgrade of existing ones are required. In light of the complexity and scale of this project, by global opening tendering, the Civil Aviation Department (CAD) of the Hong Kong Special Administrative Region Government has engaged the Egis/ADP Ingénierie consortium to provide professional services for ANS equipment implementation.

The technical consultancy and engineering services provided to the CAD by Egis and its partners will include consultancy on procurement, design, safety assessment, cutover and transition of new and upgraded/replaced ANS equipment; as well as on-site technical support/assistance during installation, integration, testing, commissioning cutover, transition and decommissioning as necessary.

Egis Asia-Pacific Aviation director Antoine Bonnaud said, "We're delighted to have been chosen by the CAD Hong Kong for this important project that is needed to support the implementation of ANS equipment for the Three-Runway System at the Hong Kong International Airport. Leading a consortium with ADP Ingénierie, we have assembled a tailored team of more than 20 engineers and experts who will set up a local system engineering office and deliver in-house support to the CAD."

Egis has a thirty-year track record of supporting air navigation service providers and providing technical assistance with implementing new ATM systems customised to needs, specific to operational constraints, to users and the local environment.

About the Egis group

IMAGINE. CREATE. ACHIEVE.
a sustainable future

A major international group in the construction engineering and mobility services sectors, Egis creates and operates intelligent infrastructure and buildings capable of responding to the climate emergency and addressing the major challenges of our time by helping to achieve more balanced, sustainable and resilient territorial development.

A 75%-owned subsidiary of Caisse des Dépôts, with the remaining 25% held by partner executives and employees, Egis places its multiple fields of expertise at the disposal of the community and makes cutting-edge innovation accessible to all projects throughout their lifecycle: consulting, engineering, operation.

Through its wide-ranging fields of activity, Egis is a central player in the collective organisation of society and the living environment of its inhabitants all over the world.

€1,07 Bn turnover in 2020

16,000 employees

With approximately €100 million turnover and nearly 900 people spread across a dozen countries and territories, Asia-Pacific is a geographical zone that offers high growth potential for Egis. The group has set itself a five-year target of significant increases in its turnover and profit in the APAC region.
